

Print Statements

Print statements are used to display data onto the java console so that the user can see the output of their code. In Java, we print by saying `System.out.println()`;

So for example, if you type: `System.out.println("Hello World!");`

The result would be: `Hello World!`

<code>\"</code>	Insert a double quote character in the text
<code>\\</code>	Insert a backslash in the text

ACII Art:

ASCII Art is a graphic design art that uses computers for a presentation of art. They were invented because earlier printers lacked the ability to print good quality images using graphic marks. Therefore they used characters instead of graphic marks.
